

Fullmatrix LED - Display Sportlicht RG 96

SPORTLICHT

LED Display systems / Electronic development / Sport IT-Service

The three colour display system RG 96 offers comprehensive possibilities for application in the sport and commercial fields.

Important results of this modern development in the market of RG display systems are:

- modular, super flat and light construction,
- small power consumption,
- purely static operation,
- an extremely large viewing angle,
- an even color blending of RED and GREEN already at small viewing distance.

With the options of a Multi-sport console and RG 96 software for all kinds of Multi-sport a very comfortable and always rule-fair use as Multi-sport scoreboard is also possible.

Freely scalable layouts and the PC control make the system more variable towards rule changes and desired information on the scoreboard.

You can easily create, change and display texts, graphics and sequences with a user-friendly software. Special software solutions offer comprehensive application possibilities within many kinds of sports.

With interfaces for timing and datahandling systems, which we offer e.g. for athletics, swimming, diving, cycling or gymnastics, the RG 96 is the perfect information system on a high level in accordance with the rules of the respective international sports federations.

The module RG 96 is particularly suitable for installation in indoor pools because of its corrosion- and chlorine-resistance.

For outdoor use the System RG96 is also available with very bright, bicolour LED's and sun slat.
