

LED System RG96

Mobile, single- and multi-line displays

SPORTLICHT

LED Display systems / Electronic development / Sport IT-Service

From the simple time scoreboard over industrial scoreboards up to the graphic advertising banner the RG96 lines offer a wide spectrum of applications for small, mobile display units.

Single-line RG96 scoreboards are installed in many training and competition venues.

For example in the following areas:

- *date, time, temperature etc.,*
- *partial time measurement in sports facilities*
- *starting time in bob-sleigh course,*
- *countdown clock for time or rounds*
- *starting numbers and scores*

Apperatus scoreboard in gymnastics with symbol of apperatus, scores and signal light

Multi-line displays, combining 20, 28 and 40 cm characters height, are used as

■ *Infield scoreboards in athletics, cycling and tennis* for every indoor and outdoor season. These displays indicate an international competition atmosphere.

It is no longer necessary to have spacial scoreboards for each case of application. It very easy to set up additional lines and segments to gain the desired display size.

In addition to the RG96 LED display we offer a range of software packages for several kinds of sports. We also design new software on request.

For many kinds of sport and fields of application we supply:

- complete solutions with scoring and timing technique, as well as data service,
- interface modules to support the established timing and data processing systems, or
- customized developments for system integration.
