

LED System RG96

Multi-sport scoreboard and more ...

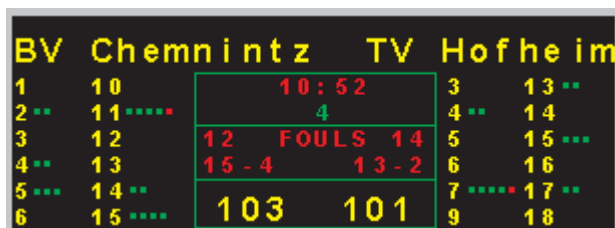

By means of full matrix display RG96 and the PC control with "Control-center multi-sport" matches are presented in an interesting and informative way. We provide a flexible software concept, which creates a sphere of liberty towards rule changes and the desired information on the scoreboard. This never can be reached by use of a special multi-sport scorebaord.

The scoring teakes place over the easy to handle Windows software or is controlled by a remote operating console.

Example:
8 m² with
24 x 8
Characters
(20 cm height)

With a size of 8 m² the system meets all requirements, except individual players faults in basketball.

Example: 11 m² with 32 x 8 Characters at 20 cm heighth
From this size the three coloured system RG96 can be used without any restrictions.

Example: 2,5 m² of the system RGBS-15

"Control-center multi-sport" offers scoreboard layouts and rule-corresponding control software for:

- Football
- Handball
- Volleyball
- Basketball
- Hockey
- Tennis
- Badminton
- and more ...

- Players lists
- scorer
- tables with tournament rankings
- advertisement and general spectator information during breaks

For smaller locations the Sportlicht LED colour display RGBS-15 is the suitable alternative. The matrix display with 15 mm pixel distance and SMD full colour diodes is able to present all information starting from 2,5 m² in size.
