

Sportlicht M31

... every match
is a final ...

LED display system "Sportlicht RGBs-15"

A modern, full coloured LED matrix display provides information service at highest level. The splended text presentation and ideal colour blending, which is necessary for result service, is based upon:

- 15mm real (not virtual) pixel distance,
- SMD light-emitting diodes with red, green and blue chip in a single LED,
- purely static, 100% flickerfree operation in the eight basic colours.

Normal use as multi-sport scoreboard as well as high quality colour graphics and advertising video, it only takes a standard computer with 10/100 MBit network adapter for operation.

A mobile use of the scoreboard is also possible. With a depth of only 6 cm and a weight of 30 kg per qm it is super flat and very light.

Dimension:	1,76m x 1,20m (2,15qm) and 6 cm flat
Power consumption:	max. 1,7 kW, average 800 W
Weight:	70 kg
Resolution:	120 x 80 = 9.600 pixel, 28.800 LED-chips
Intensity:	1.500 cd / qm
Viewing angle:	160 degree - all directions

certificated safety
against ball throwing
(German DIN 18032)

Match control software

The scoring software "RGB-Match-Control" includes layouts for the scoreboard and operation according to the rules for the following sports:

- soccer
- handball
- volleyball
- basketball
- hockey
- tennis
- badminton
- icehockey
- and additional layouts for:
 - list of team players
 - scorers
 - result lists for tournaments

The scoring is made either only at the clear Windows software or optionally also remote controlled by a multi-sport control panel.

The combination of a full matrix scoreboard and the pure PC solution for scoring creates for the first time complete liberty with respect to changes of rules and desired information on scoreboard.

A reason out and flexible concept, which guarantees future security for each customer.

Universal information system

With the additional supplied user software for

- text
- graphic
- animation
- video

the scoreboard becomes a medium for universal information and advertising. It will also be used in every break or in other events.

Text from MS-Word, every bitmap graphic, AVI-movies or also live video are controlled by a standard computer without extensiv video studio technology.
