

LED Video Display in Swimming

“Sportlicht” display systems and the software for swimming, which goes with it, have been established as a standard on highest international level. We provide displays, which offer the audience fast and comprehensive information. Our spectrum of displays ranges from 5 m² mobile scoreboards to 50 m² video wall, like it is installed in Germany’s largest indoor pool.

In contrast to special swimming scoreboards, the system is also usable very flexible for information service and advertising during public bath.

A system, which combines many advantages for applications in indoor pools in itself:

- low-maintenance, long-lived, corrossions- and chlorine - resistant
- good legibility for each spectator, because of it's extemly wide viewing angle of 140 degree
- extensive, efficient software **"Online-Control Swimming"** with freely scalable layouts for information display on different information channels
- On-line data transfer from timing (Omega, Colorado Timing) and the usual programs for data service
- same comfort on high international level also for waterpolo and diving
- Display systems and software have been used satisfactorily and developed further at countless DSV- and FINA-competitions
